

The New Language, 3D Modeling

20070732 Tae-u, An

The border between the digital world and real world was beginning to disappear. The following pictures are obvious evidence of the fusion of those worlds. This fusion will open a new era. Then, what should we prepare to take lots of opportunities which the new era will give us? Let's take note of 3D modeling among many answers from different fields. 3D modeling will become a qualification to win in the new era. To individuals, what was a qualification to take opportunities in innovations of mobile phone? Clearly, programming language, not hardware! To individuals who are not rich, financially it's too large scale to challenge the area of hardware in the 3D technology. Probably, the opportunity of the new age wait for us in a field of 3D contents. We don't have to make 3D computer, scanner, printer and TV, but can make 3D contents which make people feel innovation and creation. So, we need an ability of 3D modeling. It is like a programming language. What 3D contents we make may be important, but, first and the most importantly, we have to learn a new language, 3D Modeling. to deal with three dimensional data

3D Computer

3D Scanner

3D Printer

3D TV
