

## 3D Modeling and Texturing Mid Term Project

### Title: Modern Physics

20131125 Sungun Kwack

I wanted to create a scene with modern-looking furniture and objects.

Table: XS22 table by RLOS DESIGN

I found this table accidentally on the Internet. I chose this table because the geometrical feel of the mesh supporting the glass intrigued me.

Chair: Vessel Chair

This chair seems to be only a concept. It was excruciatingly hard to punch holes on the sides and then extrude that shape to form the red part. I retextured the whole chair like glassy-looking plastic to go with the table.

Still Life Form: Newton's Cradle

I wanted to place a modern-looking table decoration on top of my peculiar table. I like this object because it visualizes something conceptual (the law of the universe) in a physical way. I wanted to give the balls a metallic look but couldn't quite figure it out.
